### **DETAILED ACTION**

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sanyal et al(4,872,261) in view of JP 6-349663). The patent to Sanyal et al teaches the structure and method of a screen-printing plate 30 for applying solder paste to a PC board as claimed including providing mesh holes 36 defining a first printing pattern closer to the periphery of the plate 30 larger than the mesh holes 40 defining a second printing pattern near the center of the plate 30. See Fig. 2 and column 6, lines 28-32 in Sanyal et al for example. However, Sanyal et al do not show a frame for the screen-printing plate 30. It is a well known practice in the screen-printing art that a stencil plate is mounted and tensioned on a supporting frame and the stencil frame is then properly supported on top of the substrate being printed to carry out the printing operation. The '663 patent shows such a well known stencil frame 13 for supporting a screen-printing plate 11 so as to enable solder paste printing onto circuit boards. It would have been obvious to one of ordinary skill in the art to provide the stencil plate of the Sanyal et al with a supporting frame as taught by the '663 patent in order to ensure proper functioning of the screen-printing plate during the printing operation.

Claim 11 is rejected under 35 U.S.C. 103(a) as being unpatentable over Sanyal et al in view of JP 6-349663 as applied to claim 6 above, and further in view of applicant's admitted

prior art. Sanyal et al, as modified by the '663 patent teaches all that is claimed except for the laminating and contact-bonding, cutting and firing steps as recited. On page 1, second paragraph of the present specification, applicant readily admits that laminated-ceramic electronic devices are known to be manufactured by a process exactly the same as recited in claim 11. It would have been obvious to one of ordinary skill in the art to manufacture the electronic device of Sanyal et al, as modified by the '663 patent using the known and proven processes as admitted by the applicant so as to ensure the quality of the product.
